

**Congratulations,** You have purchased the absolute best anti theft product on the market. This product will give you piece of mind every time you leave your vehicle.

**V-START** is simple to use but way to complicated for a thief to take the time to figure out why the car won't start.

Keep in mind that once your unit is installed you will be the only one that knows how to start your car, other than the installer of course.

The starting sequence of your vehicle will become second nature with in the first few days of use.

The **V-START** unit comes with a by-pass plug that is very simple to use. So be sure you know the location of the unit under your hood. This plug is useful for times when you take your car in for servicing and do not wish to disclose the **SECRET** to starting your car.

The plug can also be used for carwash, valet parking etc.

-----  
Regarding installation and choosing the best trigger for you here are a few popular ones that we have used in the past.

1. Bright Switch (flash to pass) - most popular
2. L or R Blinker
3. Power window (up position)
4. Power seat
5. Power Headrest
6. Heater Control
7. Seat Heater
8. Brake pedal

There are obviously many choices however; remember that the more complicated the installation the more it will cost for labor.

**We recommend to keep the complete installation under the hood**
